The reaction scheme shows the conversion of a linear polyketide intermediate to a macrocyclic product. The starting material is a linear chain with a thiazole ring substituted with a methyl group. The chain contains several stereocenters, including a chiral auxiliary (OTBS) and a ketone group. The reaction is catalyzed by an enzyme (e) and results in the formation of a macrocyclic product (15C). The macrocycle is a 15-membered ring containing the thiazole ring and the chiral auxiliary. The product is labeled 15C.

TOHOF T S400F

The chemical structure shows a complex macrocyclic molecule. It consists of a large ring with several stereocenters. Key features include a hydroxyl group (OH) and a ketone group (C=O) on the ring. A side chain attached to the ring contains a thiazole ring (a five-membered ring with sulfur and nitrogen) and a double bond. The stereochemistry is indicated by wedged and dashed bonds.
